Building Information - Nordonia Hills City (50047) - Northfield Elementary

Program Type Expedited Local Partnership Program (ELPP)

Setting Suburban

Assessment Name Northfield Elementary School (2021 Update) DRAFT

Assessment Date (on-site; non-EEA) 2019-10-16

Kitchen Type Full Kitchen

Cost Set: 2021

Building Name Northfield Elementary

Building IRN 27672

Building Address 9374 Olde Eight Rd

Building City Northfield
Building Zipcode 44067

Building Phone 330-467-2010

Acreage 8.00

Current Grades: K-4

Teaching Stations 19

Number of Floors 1

Student Capacity 238

Current Enrollment 390

Enrollment Date 2019-09-06

Enrollment Date is the date in which the current enrollment was taken.

Number of Classrooms 17
Historical Register NO

Building's Principal Mr. Mark Kaminick

8.00 Site Acreage

Northfield Elementary School, which is not on the National Register of Historic Buildings, and originally constructed in 1916, is a 3-story, 63,639 square foot brick school building located in a small town and commercial setting. The existing facility features a conventionally partitioned design, and does not utilize modular buildings. Note that the original 3-story, 1916 portion of the building is used only for the Board Office and all other District functions. All K-4 classes are held in the subsequent additions. The structure of the overall facility contains brick exterior wall construction, with CMU/plaster wall construction in the interior. The floor system consists of slab-on grade and supported slabs. The roof structure is steel. The roofing system of the overall facility is ballasted membrane, installed over 7 years ago. The ventilation system of the building is adequate to meet the needs of the users. The Classrooms are adequately sized in terms of the current standards established by the State of Ohio. Physical Education and Student Dining spaces consists of one Gymnasium and separate Student Dining. The electrical system for the facility is inadequate. The facility is equipped with a non-compliant security system. The building does not have a compliant automatic fire alarm system. The facility is not equipped with an automated fire suppression system. The building is reported to contain asbestos. The overall building meets most ADA requirements. The school is located on an 8 acre site adjacent to residential and commercial properties. The property and playgrounds are partially fenced for security. Access onto the site is unrestricted. Site circulation is poor. There is no dedicated space for school buses to load and unload on the site. Parking for staff, visitors and community events is adequate.

No Significant Findings

A. Heating System

Description:

The elementary school is heated with six (6) gas-fired hot water boilers with air handling units and unit ventilators with hot water coils, VAV boxes with hot water coils and perimeter cabinet unit heaters. Original (1963) gas-fired furnaces are used in the kitchen and two for old corridors. Most other equipment was installed when the addition was built in 2001. This 18-year-old equipment is in poor condition and rust is beginning to deteriorate the cabinets. Hot water is distributed through a steel piping system from a pump with a standby pump at each boiler system. The air handling units include refrigerant coils for cooling. The building contains an older central building automation system. It monitors unit ventilators, rooftop air handling units and VAV boxes. The VAV boxes have factory mounted controls that are independent. The 15 CFM per person fresh air requirement of the Ohio Building Code, Mechanical Code and Ohio School Design Manual, OSDM, is satisfied. The floor to roof height is low and cannot accommodate a central system with ductwork. The site does not contain an underground fuel tank. The overall heating system is evaluated as being in a safe working order. The system is also inefficient with non-condensing boilers and much of the system should be replaced for long life expectancy.

Rating:

3 Needs Replacement

Recommendations:

Replace the boilers with condensing boilers and lower the hot water temperature reset schedule to take advantage of thermal efficiency. Replace the VAV boxes and their controls. Replace the old gas-fired furnaces and add air conditioning. Replace the Building Automation System and expand with more capability to meet OSDM standards. Much of the existing heating system can remain without replacement. The central duct distribution can remain and the hot water heating piping and pumps can remain.

Boilers inside electric room

Boiler in outside room

B. Roofing

Description:

The roof over the overall facility is a ballasted membrane system that was installed over 7 years ago in fair condition. There are District reports of current leaking. Signs of past leaking were observed during the physical assessment. Access to the roof was gained by access hatch that is in good condition. Fall safety protection cages are not provided. There were no observations of standing water on the roof. Metal cap flashings are in fair condition. Roof storm drainage is addressed through a system of roof drains, which are properly located, and in fair condition. The roof is not equipped with overflow roof drains. Provide additional roof insulation to achieve LEED Silver Certification Energy Requirements. There is a covered walkway attached to this structure at the main entrance. 12/8/21: Wet insulation was identified in 23 areas totaling 14,317 sq. ft.

Rating:

3 Needs Replacement

Recommendations:

The roof over the overall facility requires replacement to meet Ohio School Design Manual guidelines. Add overflow drains where required. Provide additional roof insulation to achieve LEED Silver Certification Energy Requirements. 12/8/21 update: Add parapet, fascia, and coping to meet minimum slope requirements when replacing roof insulation on original building. Replace exterior soffits over z-furring with spray foam insulation in conjunction with new parapet. Add roof drains at low roofs around original building to accommodate new insulation and maintain existing window openings. Add two roof drains to gym roof and remove scuppers.

Ballasted Membrane Roofing

C. Ventilation / Air Conditioning

Description:

The 2001 Addition, a Gym and Student Dining are air conditioned with rooftop air handling units. These units are now 18 years old and in poor condition. Controls at classroom VAV boxes are past their useful life. The ventilation in remaining areas use furnaces and unit ventilators to bring in code required fresh air. These unit ventilators have economizers which provide "free" cooling on mild days. Operation of VAV boxes in In code required fresh air. These unit Vertiliators have economizers which provide free cooling on mild days. Operation of VAV boxes in classrooms provide the required minimum amount of fresh air for occupants. The newer systems can provide simultaneous heating and cooling with the VAV system and is compliant with OSDM requirements. The vertilation system does not incorporate an energy recovery system. Individual toilet exhaust fans, on the roof, operate in conjunction with their associated zone units, but do not recover this lost energy. The technology server room is not separately cooled. The Art Room has exhaust and a kiln hood. There is a large, NFPA, grease hood in the Kitchen along with a dishwasher hood and gas-fired rooftop make-up air unit. Toilet exhaust fans and other building ventilation fans are on the flat roof

areas.

1 Satisfactory Rating:

Replace VAV boxes and controllers. Add air conditioning to the unit ventilators with refrigerant coils and self-contained condensing units. Replace Recommendations: old rooftop units and add air conditioning to the replaced kitchen make-up air unit. Existing gas-fired furnaces to be replaced with condensing

furnaces with split system air conditioners. Add ductless split air conditioning system to the technology server room. Replacement cost is included

in Item A - Heating System.

Kitchen make-up air unit

Back to Assessment Summary

D. Electrical Systems

Description:

The school has a 208/120 volt 3 phase, 4 wire, 2,500 amp service with (2) 1,200 amp main disconnects. This service was upgraded in 2001. One of the 1,200 amp main disconnects backfeeds the 1963 switchboard. The other main disconnect serves a switchboard installed in 2001. Most of this switchboard has HVAC equipment. Most lighting is 120 volt. There is a transfer switch with outdoor plug for a portable generator for the 1963 distribution system. Classrooms have an adequate number of general-purpose outlets and the exterior of the building has an adequate number of weatherproof, GFI, receptacles. The building includes a small lightning protection system on the old chimney. The overall electrical system meets OSDM requirements in supporting the current needs of this school but will need to be expanded if air conditioning is added to older classrooms and spaces. There is no emergency generator for the school.

and spaces. There is no emergency generator for the school.

Rating: 3 Needs Replacement

Electrical system existing conditions require a upgrade of the existing 1963 distribution system and the addition of an emergency generator. Recommendations:

12/8/21 update: System replacement not necessary for 2001 addition.

Portable generator plug

Main electrical service

Back to Assessment Summary

E. Plumbing and Fixtures

Description:

The school plumbing system meets requirements for plumbing fixtures and backflow prevention. There is a 3" domestic water meter in an underground pit near Old Eight Road. There is a backflow preventer inside with copper piping properly distributed. The domestic hot water system operates at 95 degrees F. The water heaters have been recently replaced and there are several systems throughout the building. Lavatories and wash fountains do not have individual mixing valves. The toilet facilities include handicapped fixtures with flush valves and sensor operated faucets used in public facilities. Elsewhere, fixtures are manually operated. Fixtures are not low flow, which does not meet OSDM guidelines. Water closets and urinals are wall mounted throughout with flush valves. Most sanitary piping is cast iron and at the end of useful life. The school contains large group restrooms for boys and large group restrooms for girls. There are no locker rooms or shower facilities. The Kitchen has gas fired appliances, dedicated gas fired water heater and staff toilet room. There is an in-floor cast iron grease interceptor that is periodically cleaned. There is a brick gas house with meter inside that distributes natural gas in steel piping underground and on the roof to boilers, furnaces, rooftop heating units, domestic water heaters and kitchen appliances. There is a mechanical gas shut off valve for appliances under the kitchen hood. Roof drains collect rainwater and are conveyed to the city sewer thru cast iron drain piping. The newer systems use PVC piping. The cast iron drain piping is now over 50 years old.

Rating: 3 Needs Replacement

Recommendations:

Replace water closets, urinals and their flush valves with low flow fixtures. Replace the brass (high lead content) faucets with lead free faucets. Add mixing valves at each lavatory and replace master mixing valve to deliver 140 degrees F domestic hot water thru piping loop. Replace recirculating pumps. Replace all cast iron drain piping which has reached the end of its useful life. 12/8/21 update: Domestic supply and sanitary waste piping not needed for 2001 addition.

Water service entrance

F. Windows

The Original 1916 Building which houses the District Offices needs all of the windows replaced due to age. The 1960, 1963, and 2001 additions are equipped with thermally broken aluminum windows with double glazed insulated glazing windows. Window system hardware is in good condition. The window system features integral blinds, which are in good condition. Description:

3 Needs Replacement Rating:

Provide a new insulated window system with integral blinds to meet with Ohio School Design Manual requirements in the Original Building. Recommendations:

12/8/21: Replace 3,664 sf of windows in the 1960 & 1963 additions.

Item	Cost	Unit	Whole	Original Building -	Classroom Wing	Classroom and	Classroom and	Sum	Comments

H. Structure: Walls and Chimneys

Description:

The overall facility has a brick veneer on a masonry bearing wall system, which displayed minor locations of deterioration and is in fair condition. The exterior masonry appears to have appropriately spaced and adequately caulked control joints in fair condition. The exterior masonry has not been cleaned and sealed in recent years but shows minor evidence of mortar deterioration. Interior walls are concrete masonry and glazed block and are in good condition. Interior masonry appears to have adequately spaced and caulked control joints.

2 Needs Repair Rating:

Recommendations: Provide minor tuckpointing in all areas of mortar deterioration through the overall facility. Provide masonry cleaning, sealing, caulking as required

through the overall facility. 12/8/21 update: Recoat all EIFS.

Brick Surface Needing Repair

I. Structure: Floors and Roofs

Description:

The floor construction of the base floor of the overall facility is concrete slab on grade construction, and is in good condition. The floor construction of the intermediate floors of the overall facility is cast-in-place concrete construction, and is in good condition. Ceiling to structural deck spaces are insufficient to accommodate HVAC, electrical, and plumbing scopes of work in required renovations. The roof construction of the overall facility is tectum concrete plank type construction, and is in good condition.

1 Satisfactory Rating:

Recommendations: Existing conditions require no renovation or replacement at the present time.

J. General Finishes

Description:

The overall facility features conventionally partitioned Classrooms with VCT/VAT flooring, suspended ceilings, as well as painted wall finishes, and they are in fair condition. The overall facility has Corridors with carpet and VCT/VAT flooring, suspended ceilings, as well as painted wall finishes, and they are in fair condition. Classroom casework in the overall facility is wood construction with plastic laminate tops, is adequately provided, and in fair condition. The facility is equipped with wood non-louvered interior doors that are bath flush mounted and recessed with and without proper ADA hardware and clearances and in fair to good condition. The Gymnasium spaces have rubber flooring, open ceilings, as well as painted wall finishes, and they are in good condition. The Media Center located in the 1960 Addition, has carpet flooring, suspended ceilings, as well as painted wall finishes, and they are in fair condition. Student Dining has VCT flooring, open ceilings, as well as painted wall finishes, and they are in fair condition. The existing Kitchen is full service, is undersized based on current enrollment, and the existing Kitchen equipment, is in fair condition. The Kitchen hood is in fair condition and is equipped with the required UL 300 compliant wet chemical fire suppression system.

Rating: 3 Needs Replacement

Recommendations:

Provide for a partial replacement of finishes and casework due to installation of systems outlined in Items A, C, D, K, L, M, N, T, and U. 12/8/21 update: Add insulation to exterior walls of 1960 & 1963 additions.

Typical Classroom Setup

K. Interior Lighting

Description:

The school has a combination of 120 volt fluorescent fixtures and LED fixtures. Newer Classrooms and corridors use 2' X 2' or 2' X 4' - 3 or 4 lamp lay-in fixtures, 45 foot candle measured in Classrooms, 30 foot candles measured in Corridors. Older classrooms have original pendent linear fixtures with upgrades to 28 watt T8 lamps. The gymnasium contains 1' X 4' high intensity LED pendant fixtures, measured at40 foot candles. Mechanical spaces utilize 4' fluorescent fixtures. The Gym and Cafeteria encompass daylighting with linear lighting. Occupancy sensors are used in the newer addition and extended to older classrooms from a recent energy project.

3 Needs Replacement Rating:

Completely replace the lighting due to the installation of a fire suppression system. Replace light sources with LED lamps to provide longer life Recommendations:

systems and reduce energy consumption. Revise classroom lighting to meet 50 foot candle requirement of OSDM. Revise Gymnasium lighting to reach 60 foot candles recommended in OSDM. Provide classrooms lighting with dual level switching and occupancy sensors. Provide added

controls in Gym and Cafeteria to make use of daylight harvesting.

L. Security Systems

Description:

The school has security systems with cameras, magnetic door controls, and 2-way intercom. The office has a TV screen that can pan various cameras and during an alert can be monitored by school officials on their phones. Exterior lighting consists of wall lights at entrances and walkways. Building entrances with overhangs have lights in ceilings. Parking lots have limited pole lights with LED lamp sources. Motion sensors are not included and there are a minimum number of exterior cameras. An automatic visitor control system is provided. A compliant computer-controlled access control system integrating alarms and video signals, with appropriate UPS backup, is not provided. The system is not equipped with card/biometric readers. The security system is not fully compliant with OSDM guidelines.

3 Needs Replacement Rating:

Provide for a complete replacement of the building's security system to meet all current OSDM requirements. Recommendations:

M. Emergency/Egress Lighting

The newer addition to the school uses corridor recessed lights with battery backup for emergency egress lighting to meet egress needs. Older corridors use wall mounted battery-operated egress lights. Exterior doors have exit signs and exterior wall mounted egress lights above doors. These fixtures do not use LED lamp sources. Description:

3 Needs Replacement Rating:

The exit lights and egress lights should be changed to LED for longer life. Recommendations:

N. Fire Alarm

The fire alarm system is older with a non-addressable EST2 system. The system includes smoke detectors, heat detectors, pull stations, and sprinkler alarms. Audio and visual devices are found in classrooms. They are missing from conference rooms and are thus not in compliance with OSDM guidelines. Description:

3 Needs Replacement Rating:

The fire alarm system should be replaced with a fully addressable system that utilizes voice commands. Provide speaker/strobes in classrooms Recommendations: and strobes in all toilet rooms. Provide smoke detectors in corridors and tamper/flow switches to monitor the new fire suppression system. Duct

smoke detectors shall be provided for all new air-handling systems, where required by Code.

Wall strobe in electric room

O. Handicapped Access

Description:

At the site, there is an accessible route provided from the public right-of-way, the accessible parking areas, and from the passenger unloading zone to the main entrance of the school. The exterior entrances are not ADA accessible. Access from the parking/drop-off area to the building entries is not compromised by steps or steep ramps. Adequate handicap parking is provided. The main entry is not equipped with an ADA power assist door. On the interior of the building, space allowances and reach ranges are mostly compliant. There is an accessible route through the building which does not include protruding objects. Ground and floor surfaces are compliant. Ramps meet all ADA requirements. The 1916 Building does not have a compliant elevator. The remainder of the building is single-story. Special provisions for floor level changes in this single-story structure are not required. Some interior doors are recessed, some are not. In the 1960 and 1963 portions, new recessed doors and hardware will be required. ADA toilet facilities are provided. ADA signage is not fully provided on the interior or the exterior of the building. 12/6/21 update: All ramps no longer meet ADA requirements.

Rating: 2 Needs Repair

Recommendations: Provide ADA-compliant signage, power assist door opener, elevators, new doors and frames, and door hardware in the overall facility to facilitate

the school's meeting of ADA requirements. 12/6/21 update: Replace ADA ramp to meet requirements.

ADA Toilet

Back to Assessment Summary

P. Site Condition

Description:

The site experiences a slope downward toward the west and is located in a small-town commercial setting with moderate tree and shrub landscaping. The site is shared with the district Board of Education Building. The site is bordered by heavily travelled city streets. Two entrances onto the site impede proper separation of bus & other vehicular traffic, & one-way bus traffic is provided. There is a curbside bus loading & unloading zone in front of the school which is separated from other vehicular traffic until exiting the site. Due to the traffic pattern in the area, and bus/parent drop off/pickup traffic, this school and Nordonia Middle School regularly violate fire code as traffic jams are created by the parents/buses accessing the sites. Parking is facilitated by multiple asphalt parking lots in fair condition, containing 97 spaces which provides adequate parking for staff and visitors, but there are not enough handicapped parking spaces provided. The site & parking lot drainage design, consisting of sheet flow, swales, catch basins, storm sewer, and detention basins provides adequate excavation of storm water. No problems with erosion or ponding were observed. Though many of the collars for the catch basins showed cracks and damages, and some catch basins were full of debris. Concrete curbs are in fair condition & are appropriately located. Asphalt curbs are in poor condition, and are providing little use. Trash pick-up and service drive pavement is in good condition & but one area needs to be upgraded from sidewalk to be equipped with a concrete pad area for dumpsters. The school is not equipped with a conventional loading dock. Some of the concrete & asphalt sidewalks are not properly sloped, more so in the west and north ends of the site. They are located to provide adequate & logical flow of pedestrian traffic, and are in fair condition. Exterior steps are in good condition. Site fencing is in poor condition. The west side of the site shows ware from cars pushing into the fence, and the fencing to the north and west is damaged where tress and limbs have fallen on it. The playground equipment is in fair condition but the swings are showing signs of rust. The playground is on a combination of hard & compliant soft surfaces, with a basketball court being provided on an asphalt surface. The mulch for the playground could be replaced. The athletic facilities were not included in the assessment area. Site features are suitable for outdoor instruction in some areas where there is enough space between two wings of the building and out by the baseball field, otherwise there is no available space for it. There is currently nothing to facilitate this though. 12/8/21 update: Asphalt is in poor condition and needs full replacement.

Rating:

3 Needs Replacement

Recommendations:

The asphalt and curb onsite are in need of repair along with some sidewalk damage. Several areas on the site, such as the asphalt and sidewalk on the west end of the school building, do not comply with ADA requirements and should be corrected to allow access for these individuals. Also, there are many door exits that do not provide sidewalk access for exit paths. Several ADA parking spots are also necessary to comply with requirements. One catch basin on site shows debris filling the storm pipe, and many of the existing concrete collars show damage and need replaced. Bus and parent drop off patterns should also be discussed as it was mentioned while visiting that fire code is violated every day with the current set up. A dumpster pad should be provided for the dumpster left at the front of the building. The fencing should also be repaired as it is showing damage from fallen tree limbs and car impacts. Finally, a new ADA ramp is required for the modular building as the existing one is too steep. 12/8/21 update: Fully replace all asphalt.

Back to Assessment Summary

R. Water Supply

Description:

The school has a supply of water from the municipal system. There is a 3" water meter and backflow preventer with adequate water pressure. There are multiple limited area sprinkler systems connected to the domestic water distribution. These connections include backflow preventers and flow switches connected to the fire alarm system. Periodic testing and draining of these systems is a nuisance. There is no domestic booster pump and there is no fire pump. Fire hydrants are located at the street. The system provides adequate pressure and capacity for future needs of this school.

1 Satisfactory Rating:

Existing site conditions require no additional work at this time. Recommendations:

U. Life Safety

The building is not equipped with a complete fire suppression system. There is no emergency generator system for egress lighting during a power outage. There is no fire pump. There is a hood extinguishing system in the Kitchen. There are hold open devices on some corridor doors. Description:

3 Needs Replacement Rating:

Add a complete sprinkler system and remove the old limited area sprinkler systems. Add an emergency generator with automatic transfer switch and connect to life safety fixtures. Provide a new backflow preventer and a new water service line to meet the needs of the new sprinkler system. Recommendations:

V. Loose Furnishings

Description:

The typical Classroom furniture is mismatched, and in generally fair condition. The facility's furniture and loose equipment were evaluated in item 6.17 in the CEFPI section of this report, and on a scale of 1 to 10 the overall facility received a rating of 5 due to observed conditions, and due to the fact that it lacks some of the Design Manual required elements. 12/8/21 update: CEFPI rating changed to 0 to 3 for original building, 1960 addition, and 1963 addition.

3 Needs Replacement Rating:

Recommendations: Provide replacement of outdated furniture as noted below.

Item	Cost Unit	Whole	Original Building - BOE	Classroom Wing	Classroom and Cafeteria	Classroom and Gymnasium	Sum	Comments

Typical Classroom Setup

Cafeteria Tables

W. Technology

Description:

The school is equipped with an older technology system. Smart Boards have replaced the old TV's in classrooms. The classrooms are equipped with an adequate amount of data ports to meet OSDM compliance. Data outlets should be added at necessary locations to meet future requirements. There is an intercom system that includes wall mounted outdoor and indoor speakers. The facility is equipped with a centralized clock system that is not operational. Sound systems are adequately provided in Gym, Student Dining and Music spaces. OSDM compliant computer network infrastructure is provided. Classrooms are equipped with telephones.

3 Needs Replacement Rating:

Provide complete replacement of technology systems to meet OSDM guidelines, and to sustain the capacity to keep pace with technology Recommendations:

development.

Suitability Appraisal of 1.0 The School Site for Northfield Elementary School (2021 Update) DRAFT		
1.0 The School Site	Points Allocated	Points
1.1 Site is large enough to meet educational needs as defined by state and local requirements	25	15
The 8-acre site is less than the recommended 14 acres per OSDM for an elementary school with 350+ students.		
1.2 Site is easily accessible and conveniently located for the present and future population	20	17
Access is via a single driveway access from Old Eight Road to a loop drive or a supplemental drive to the parking lot along the side and re	ar of the building.	
1.3 Location is removed from undesirable business, industry, traffic, and natural hazards	10	5
The location is near the center of town with a town square park and other commercial and residential properties nearby. The roads in and a major routes.	around the school pro	pperty are
1.4 Site is well landscaped and developed to meet educational needs	10	7
Mature trees are scattered throughout the site. The courtyards are mildly well-developed.		
1.5 ES Well equipped playgrounds are separated from streets and parking areas MS Well equipped athletic and intermural areas are separated from streets and parking HS Well equipped athletic areas are adequate with sufficient solid-surface parking	10	4
The playground is near the rear parking area with little separation.		
1.6 Topography is varied enough to provide desirable appearance and without steep inclines	5	5
The site is relatively flat and well drained.		
1.7 Site has stable, well drained soil free of erosion	5	5
No evidence of significant soil erosion or ponding exists.		
1.8 Site is suitable for special instructional needs , e.g., outdoor learning	5	5
The courtyards allow for outdoor instructional needs.		
1.9 Pedestrian services include adequate sidewalk with designated crosswalks, curb cuts, and correct slopes	5	3
Well-maintained sidewalks provide pedestrian access. No curb cuts are present.		
1.10 ES/MS Sufficient on-site, solid surface parking for faculty and staff is provided HS Sufficient on-site, solid surface parking is provided for faculty, students, staff and community	5	3
84 paved parking spaces are provided in the side and rear lots. Parking appears to be tight, but varies depending on functions relative to the site.	he School Board offic	es on this
TOTAL - 1.0 The School Site	100	69

2.0 Structural and Mechanical Features Points Allocated Points Po	witability Apprecial of 2.0 Ctm at well and Machanical Factures for Northfield Flamontow, Cabaci (2004 Undata) DDAFT	<u> </u>	Bottom of page
2.1 Structure meets all barrier-free requirements both externally and internally Typical interior coors are not ADA compliant. Although diminishing fountains are wheelchair compliant, no standard height dimining fountain is provided per ADA. Lavatories are not ADA. ADA. ADA compliant belief stalls and water closests are provided. 2.2 Roots appear sound, have positive drainage, and are weather tight The roof is a built-up asphalt system with interior roof drains. There is some evidence of ponding water. Leaks were reported. 2.3 Foundations are strong and stable with no observable cracks Assignificant foundation cracks were observed. 2.4 Exterior and interior walls have sufficient expansion joints and are free of deterioration Some deterioration is present. Expansion joints are intrequent, but not too much of an issue due to low height and window extent. 2.5 Entrances and exits are located so as to permit efficient student traffic flow Corridors terminate at exits. 2.6 Building "envestope" generally provides for energy conservation (see criteria) The building meets general criteria. 2.7 Structure is free of friable asbestos and toxic materials There are some asbestos materials within the building. 2.8 Interior walls permit sufficient flexibility for a variety of class sizes The interior walls are typically CMU and drywaltylaster construction. Mechanical Electrical Points Allocated Points Allocated There was are sufficient personnel will include the construction. 2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements There are a sufficient power outlets. 2.11 Each tracing/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are property maintained including provisions for the disable of the points and are placed well on awarage. 2.14 Number and size of restrooms meet requirements.	uitability Appraisal of 2.0 Structural and Mechanical Features for Northfield Elementary School (2021 Update) DRAFT 2.0 Structural and Mechanical Features	Points Allocated	Points
Typical interior doors are not ADA compliant. Although dinking fountains are wheelchair compliant, no standard height drinking fountain is provided per ADA. There is some evidence of ponding water. Leaks were reported. 2.3 Foundations are strong and stable with no observable cracks ANo significant foundation cracks were observed. 2.4 Exterior and interior walls have sufficient expansion joints and are free of deterioration Some deterioration is present. Expansion joints are infrequent, but not too much of an issue due to low height and window extent. 2.5 Entrances and exits are located so as to permit efficient student traffic flow Corridors terminate at exits. 2.6 Building "envelope" (generally provides for energy conservation (see criteria) There are some asbestos materials within the building. 2.8 Interior walls permit sufficient flexibility for a variety of class sizes There are some asbestos materials within the building. 2.9 Adequate light sources are well maintained, and properly placed and are not subject to overheating Light levels are slightly low in the corridors. 2.10 Interior walls are slightly low in the corridors. 2.11 Each teaching/learning area has adequate with sufficient pressure to meet health and safety requirements There are sufficient power outlets. 2.12 Electrical controls are safety protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled The quantity of restrooms meet requirements The quantity of restrooms meet requirements.	Structural		
Lavations are not ADA. ADA compliant toiler stalls and water closels are provided. 2.2 Roofs appear sound, have positive drainage, and are weather tight The roof is a built-up asphalt system with interior roof drains. There is some evidence of ponding water. Leaks were reported. 2.3 Foundations are strong and stable with no observable cracks No significant foundation cracks were observed. 2.4 Exterior and interior walls have sufficient expansion joints and are free of deterioration Some deterioration is present. Expansion joints are infrequent, but not too much of an issue due to low height and window extent. 2.5 Entrances and exits are located so as to permit efficient student traffic flow Corridors terminate at exits. 2.6 Building "envelope" generally provides for energy conservation (see orderia) The building meets general critica. 2.7 Structure is free of friable asbestos and toxic materials There are some asbestos materials within the building. 2.8 Interior walls permit sufficient flexibility for a variety of class sizes The interior walls are typically CMU and drywall/plaster construction. Mechanical/Electrical Points Allocated Points Allocated Points Allocated Points Allocated Points Allocated Points Preserve sufficient prover outlets. 2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements There are sufficient prover outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled There are disconnects on the electrical equipment. 2.14 Number and size of restrooms meet requirements The quantity of restrooms meet requirements.	2.1 Structure meets all barrier-free requirements both externally and internally	15	10
The roof is a built-up asphalt system with interior roof drains. There is some evidence of ponding water. Leaks were reported. 2.3 Foundations are strong and stable with no observable cracks No significant foundation cracks were observed. 2.4 Exterior and interior walls have sufficient expansion joints and are free of deterioration Some deterioration is present. Expansion joints are infrequent, but not too much of an issue due to low height and window extent. 2.5 Entrances and exits are located so as to permit efficient student traffic flow Corridors terminate at exits. 2.6 Building "envelope" generally provides for energy conservation (see criteria) The building meets general criteria. 2.7 Structure is free of frisble asbestos and toxic materials There are some asbestos materials within the building. 2.8 Interior walls permit sufficient flexibility for a variety of class sizes The interior walls are typically CMU and drywall/plaster construction. Mechanical/Electrical Points Allocated Poin		ગ્રાંn is provided per ADA.	
2.3 Foundations are strong and stable with no observable cracks No significant foundation cracks were observed. 2.4 Exterior and interior walls have sufficient expansion joints and are free of deterioration Some deterioration is present. Expansion joints are infrequent, but not foo much of an issue due to low height and window extent. 2.5 Entrances and exits are located so as to permit efficient student traffic flow Corridors terminate at exits. 2.6 Building "envelope" generally provides for energy conservation (see criteria) The building meets general criteria. 2.7 Structure is free of friable asbestos and toxic materials There are some asbestos materials within the building. 2.8 Interior walls permit sufficient flexibility for a variety of class sizes The interior walls are typically CMU and drywall/plaster construction. Mechanical/Electrical Points Allocated The water pressure is good. 2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications There are disconnects on the electrical equipment. 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled 10 7 Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	2.2 Roofs appear sound, have positive drainage, and are weather tight	15	10
No significant foundation cracks were observed. 2.4 Exterior and interior walls have sufficient expansion joints and are free of deterioration is present. Expansion joints are infrequent, but not too much of an issue due to low height and window extent. 2.5 Entrances and exits are located so as to permit efficient student traffic flow 10 Corridors terminate at exits. 2.6 Building "envelope" generally provides for energy conservation (see criteria) 10 8 The building mests general criteria. 2.7 Structure is free of friable asbestos and toxic materials 10 4 There are some asbestos materials within the building. 2.8 Interior walls permit sufficient flexibility for a variety of class sizes 10 5 The interior walls are typically CMU and drywall/plaster construction. Mechanical/Electrical Points Allocated Points 2.9 Adequate light sources are well maintained, and properly placed and are not subject to overheating 15 9 Light levels are slightly low in the corridors. 2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements 15 12 There are as sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible 10 8 There are as sufficient power outlets. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled 10 7 Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	The roof is a built-up asphalt system with interior roof drains. There is some evidence of ponding water. Leaks were reported.		
2.4 Exterior and interior walls have sufficient expansion joints and are free of deterioration Some deterioration is present. Expansion joints are infrequent, but not too much of an issue due to low height and window extent. 2.5 Entrances and exits are located so as to permit efficient student traffic flow Corridors terminate at exits. 2.6 Building "envelope" generally provides for energy conservation (see criteria) The building meets general criteria. 2.7 Structure is free of friable asbestos and toxic materials 10 4 There are some asbestos materials within the building. 2.8 Interior walls permit sufficient flexibility for a variety of class sizes The interior walls are typically CMU and drywall/plaster construction. Mechanical/Electrical 2.9 Adequate light sources are well maintained, and property placed and are not subject to overheating Light levels are slightly low in the corridors. 2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements 15 12 The water pressure is good. 2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications 15 12 There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	2.3 Foundations are strong and stable with no observable cracks	10	9
Some deterioration is present. Expansion joints are infrequent, but not too much of an issue due to low height and window extent. 2.5 Entrances and exits are located so as to permit efficient student traffic flow Corridors terminate at exits. 2.6 Building "envelope" generally provides for energy conservation (see criteria) The building meets general criteria. 2.7 Structure is free of friable asbestos and toxic materials 10 4 There are some asbestos materials within the building. 2.8 Interior walls permit sufficient flexibility for a variety of class sizes 10 5 The interior walls are typically CMU and drywall/plaster construction. Mechanical/Electrical Points 2.9 Adequate light sources are well maintained, and properly placed and are not subject to overheating Light levels are slightly low in the corridors. 2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements 15 12 The water pressure is good. 2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications 15 12 There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible 10 8 There are disconnects on the electrical equipment. 2.13 Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	No significant foundation cracks were observed.		
2.5 Entrances and exits are located so as to permit efficient student traffic flow Corridors terminate at exits. 2.6 Building "envelope" generally provides for energy conservation (see criteria) The building meets general criteria. 2.7 Structure is free of triable asbestos and toxic materials There are some asbestos materials within the building. 2.8 Interior walls permit sufficient flexibility for a variety of class sizes The interior walls are typically CMU and drywall/plaster construction. Mechanical/Electrical 2.9 Adequate light sources are well maintained, and properly placed and are not subject to overheating 1.5 general water supply is adequate with sufficient pressure to meet health and safety requirements 1.5 The water pressure is good. 2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications 1.5 There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled 10 7 Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	2.4 Exterior and interior walls have sufficient expansion joints and are free of deterioration	10	8
Corridors terminate at exits. 2.6 Building "envelope" generally provides for energy conservation (see criteria) 10 8 The building meets general criteria. 2.7 Structure is free of triable asbestos and toxic materials 10 4 There are some asbestos materials within the building. 2.8 Interior walls permit sufficient flexibility for a variety of class sizes 10 5 The interior walls are typically CMU and drywall/plaster construction. Mechanical/Electrical Points Allocated Points 2.9 Adequate light sources are well maintained, and properly placed and are not subject to overheating 15 9 Light levels are slightly low in the corridors. 2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements 15 12 The water pressure is good. 2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications 15 12 There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible 10 8 There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled 10 7 Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements 10 7	Some deterioration is present. Expansion joints are infrequent, but not too much of an issue due to low height and window extent.		
2.6 Building "envelope" generally provides for energy conservation (see criteria) The building meets general criteria. 2.7 Structure is free of friable asbestos and toxic materials There are some asbestos materials within the building. 2.8 Interior walls permit sufficient flexibility for a variety of class sizes The interior walls are typically CMU and drywall/plaster construction. Mechanical/Electrical Points Allocated Points 2.9 Adequate light sources are well maintained, and properly placed and are not subject to overheating Light levels are slightly low in the corridors. 2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements The water pressure is good. 2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled There are disconnects are safely protected well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	2.5 Entrances and exits are located so as to permit efficient student traffic flow	10	9
The building meets general criteria. 2.7 Structure is free of friable asbestos and toxic materials There are some asbestos materials within the building. 2.8 Interior walls permit sufficient flexibility for a variety of class sizes The interior walls permit sufficient flexibility for a variety of class sizes The interior walls permit sufficient flexibility for a variety of class sizes Mechanical/Electrical Points Allocated Points 2.9 Adequate light sources are well maintained, and properly placed and are not subject to overheating 15 9 Light levels are slightly low in the corridors. 2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements The water pressure is good. 2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications 15 12 There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled 10 7 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled 10 7 The quantity of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	Corridors terminate at exits.		
2.7 Structure is free of friable asbestos and toxic materials There are some asbestos materials within the building. 2.8 Interior walls permit sufficient flexibility for a variety of class sizes The interior walls are typically CMU and drywall/plaster construction. Mechanical/Electrical Points Allocated Points 2.9 Adequate light sources are well maintained, and properly placed and are not subject to overheating Light levels are slightly low in the corridors. 2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements The water pressure is good. 2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications 15 12 There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled The punnity of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	2.6 Building "envelope" generally provides for energy conservation (see criteria)	10	8

The building meets general criteria.		
2.8 Interior walls permit sufficient flexibility for a variety of class sizes The interior walls are typically CMU and drywall/plaster construction. Mechanical/Electrical 2.9 Adequate light sources are well maintained, and properly placed and are not subject to overheating Light levels are slightly low in the corridors. 2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements The water pressure is good. 2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	2.7 Structure is free of friable asbestos and toxic materials	10	4
Mechanical/Electrical Points Allocated Points 2.9 Adequate light sources are well maintained, and properly placed and are not subject to overheating Light levels are slightly low in the corridors. 2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements 15 12 The water pressure is good. 2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications 15 12 There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	There are some asbestos materials within the building.		
Mechanical/Electrical Points Allocated Points 2.9 Adequate light sources are well maintained, and properly placed and are not subject to overheating	2.8 Interior walls permit sufficient flexibility for a variety of class sizes	10	5
2.9 Adequate light sources are well maintained, and properly placed and are not subject to overheating Light levels are slightly low in the corridors. 2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements The water pressure is good. 2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	The interior walls are typically CMU and drywall/plaster construction.		
Light levels are slightly low in the corridors. 2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements 15 12 The water pressure is good. 2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications 15 12 There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	Mechanical/Electrical	Points Allocated	Points
2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements The water pressure is good. 2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	2.9 Adequate light sources are well maintained, and properly placed and are not subject to overheating	15	9
The water pressure is good. 2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	Light levels are slightly low in the corridors.		
2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications 15 12 There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible 10 8 There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled 10 7 Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements	15	12
There are sufficient power outlets. 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled 10 7 Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	The water pressure is good.		
 2.12 Electrical controls are safely protected with disconnect switches easily accessible There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled 10 7 Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements. 	2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications	15	12
There are disconnects on the electrical equipment. 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled 10 7 Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	There are sufficient power outlets.		
 2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled 10 7 Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements. 	2.12 Electrical controls are safely protected with disconnect switches easily accessible	10	8
Drinking fountains exist and are placed well on average. 2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	There are disconnects on the electrical equipment.		
2.14 Number and size of restrooms meet requirements 10 7 The quantity of restrooms meet requirements.	2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled	10	7
The quantity of restrooms meet requirements.	Drinking fountains exist and are placed well on average.		
	2.14 Number and size of restrooms meet requirements	10	7
2.15 Drainage systems are properly maintained and meet requirements 10 8	The quantity of restrooms meet requirements.		
	2.15 Drainage systems are properly maintained and meet requirements	10	8

2.16 Fire alarms, smoke detectors, and sprinkler systems are properly maintained and meet requirements	10	2
There is no sprinkler system.		
2.17 Intercommunication system consists of a central unit that allows dependable two-way communication between the office and instructional areas	10	2
A two-way paging system does not exists. One cannot call the office from the classrooms.		
2.18 Exterior water supply is sufficient and available for normal usage	5	4
Hose bibbs exist around the building.

Suitability Appraisal of 3.0 Plant Maintainability for Northfield Elementary School (2021 Update) DRAFT		
3.0 Plant Maintainability	Points Allocated	Points
3.1 Windows, doors, and walls are of material and finish requiring minimum maintenance	15	10
The windows are aluminum. The interior doors are wood and exterior doors vary among aluminum, hollow metal, or wood. Interior exterior walls are brick.	r walls are gypsum board or	CMU and
3.2 Floor surfaces throughout the building require minimum care	15	12
Floors are typically VAT/VCT, carpet, or terrazzo.		
3.3 Ceilings and walls throughout the building, including service areas, are easily cleaned and resistant to stain	10	8
Walls and ceilings are easily maintained.		
3.4 Built-in equipment is designed and constructed for ease of maintenance	10	8
Built-in equipment is of maintainable materials.		
3.5 Finishes and hardware, with compatible keying system, are of durable quality	10	7
The finishes allow for ease of maintenance.		
3.6 Restroom fixtures are wall mounted and of quality finish	10	7
Adequate fixtures are provided.		
3.7 Adequate custodial storage space with water and drain is accessible throughout the building	10	9
Custodial storage spaces are provided throughout the building.		
3.8 Adequate electrical outlets and power, to permit routine cleaning, are available in every area	10	8
There are adequate power outlets.		
3.9 Outdoor light fixtures, electrical outlets, equipment, and other fixtures are accessible for repair and replacement	10	4
The lights are mounted high on the building. Ladders or a lift are required to service these fixtures.		

TOTAL - 3.0 Plant Maintainability

Suitability Appraisal of 4.0 Building Safety and Security for Northfield Elementary School (2021 Update) DRAFT

4.0 Building Safety and Security	Points Allocated	Points
Site Safety		
4.1 Student loading areas are segregated from other vehicular traffic and pedestrian walkways	15	5
The bus loop is part of the main drive.		
4.2 Walkways, both on and offsite, are available for safety of pedestrians	10	8
Concrete sidewalks are provided for pedestrians.		
4.3 Access streets have sufficient signals and signs to permit safe entrance to and exit from school area	5	4
Adequate signaling and/or signage is provided.		
4.4 Vehicular entrances and exits permit safe traffic flow	5	1
There is some sharing of drives creating some crossover traffic within the site.		
4.5 ES Playground equipment is free from hazard MS Location and types of intramural equipment are free from hazard HS Athletic field equipment is properly located and is free from hazard	5	4
Athletic fields and playground equipment are well-maintained.		
Building Safety	Points Allocated	Points
4.6 The heating unit(s) is located away from student occupied areas	20	16
It is a forced air system.		
4.7 Multi-story buildings have at least two stairways for student egress	15	15
This is a one-story building for students and a 3-story building for Board Offices.		
4.8 Exterior doors open outward and are equipped with panic hardware	10	9
Exterior doors are equipped with panic hardware and open outward.		
4.9 Emergency lighting is provided throughout the entire building with exit signs on separate electrical circuits	10	8
There is good coverage of exits.		
4.10 Classroom doors are recessed and open outward	10	2
Classroom doors open outward but are not fully recessed.		
4.11 Building security systems are provided to assure uninterrupted operation of the educational program	10	2
A full security upgrade is necessary.		
4.12 Flooring (including ramps and stairways) is maintained in a non-slip condition	5	4
The flooring is well-maintained.		
4.13 Stair risers (interior and exterior) do not exceed 6 1/2 inches and range in number from 3 - 16	5	5
The stairs in the Board Office were not difficult to use.		
4.14 Glass is properly located and protected with wire or safety material to prevent accidental student injury	5	4
There is no wire glass in the building. Glass in hazardous locations may be tempered.		
4.15 Fixed Projections in the traffic areas do not extend more than eight inches from the corridor wall	5	4
There are no fixed projections extending into the corridor. The classroom doors are semi-recessed.		

4.16 Traffic areas terminate at an exit or a stairway leading to an egress	5	5
The corridors terminate at exit doors.		
Emergency Safety	Points Allocated	Points
4.17 Adequate fire safety equipment is properly located	15	12
The equipment installed is properly located.		
4.18 There are at least two independent exits from any point in the building	15	14
All corridors terminate at an egress door, providing two means of egress throughout the building.		
4.19 Fire-resistant materials are used throughout the structure	15	12
The building is constructed of masonry, concrete slab-on-grade, and steel roof framing.		
4.20 Automatic and manual emergency alarm system with a distinctive sound and flashing light is provided	15	6
There are some horn/strobes throughout the facility. A full upgrade will be required.		
TOTAL - 4.0 Building Safety and Security	200	140

Suitability Appraisal of 5.0 Educational Adequacy for Northfield Elementary School (2021 Update) DRAFT

5.0 Educational Adequacy	Points Allocated	Points
Academic Learning Space		
5.1 Size of academic learning areas meets desirable standards	25	18
The rooms are appropriately 700 SF.		
5.2 Classroom space permits arrangements for small group activity	15	5
Some furniture placement is possible to create small spaces.		
5.3 Location of academic learning areas is near related educational activities and away from disruptive noise	10	4
Four classrooms require circulation through the Cafeteria.		
5.4 Personal space in the classroom away from group instruction allows privacy time for individual students	10	5
The typical Classroom is provided with separate areas.		
5.5 Storage for student materials is adequate	10	2
Storage for student materials is minimal.		
5.6 Storage for teacher materials is adequate	10	2
Teacher material storage is limited to loose furnishings such as desks, file cabinets, storage cabinets.		
Special Learning Space	Points Allocated	Points
5.7 Size of special learning area(s) meets standards	15	8
Special learning areas are limited to a small set of rooms.		
5.8 Design of specialized learning area(s) is compatible with instructional need	10	5
Special learning areas are limited to a small set of rooms.		
5.9 Library/Resource/Media Center provides appropriate and attractive space	10	6
The provided space is very adequate.		
5.10 Gymnasium (or covered P.E. area) adequately serves physical education instruction	5	4
The Gymnasium is very adequate.		
5.11 ES Pre-kindergarten and kindergarten space is appropriate for age of students and nature of instruction MS/HS Science program is provided sufficient space and equipment	10	8
The rooms are appropriate for the age of the students.		
5.12 Music Program is provided adequate sound treated space	5	3
More sound control is required.		
5.13 Space for art is appropriate for special instruction, supplies, and equipment	5	3
Minimal storage exists and equipment exists.		
School Facility Appraisal	Points Allocated	Points
5.14 Space for technology education permits use of state-of-the-art equipment	5	4
There is space for computers in the Classrooms.		
5.15 Space for small groups and remedial instruction is provided adjacent to classrooms	5	4

Space for small groups are provided in some areas of the building.

5.16 Storage for student and teacher material is adequate

5

1

Storage for student materials is minimal. Teacher material storage is limited to loose furnishings such as desks, file cabinets, storage cabinets.

Support Space	Points Allocated	Points
5.17 Teacher's lounge and work areas reflect teachers as professionals	10	7
The Teacher's Lounge is adequate.		
5.18 Cafeteria/Kitchen is attractive with sufficient space for seating/dining, delivery, storage, and food preparation	10	6
The Cafeteria accommodates the students. The Kitchen is well-equipped according to the OSDM.		
5.19 Administrative offices provided are consistent in appearance and function with the maturity of the students served	5	4
The Administrative Offices are in good condition.		
5.20 Counselor's office insures privacy and sufficient storage	5	4
The Counselor's Office is near the Administrative Offices and assures privacy. Storage is provided.		
5.21 Clinic is near administrative offices and is equipped to meet requirements	5	2
The Clinic is part of the office but is very small.		
5.22 Suitable reception space is available for students, teachers, and visitors	5	2
The space is adequate. More space is necessary.		
5.23 Administrative personnel are provided sufficient work space and privacy	5	4
The Administrative Offices are separated from the Reception Area with full height partitions and doors.		
OTAL - 5.0 Educational Adequacy	200	111

Suitability Appraisal of 6.0 Environment for Education for Northfield Elementary School (2021 Update) DRAFT

6.0 Environment for Education	Points Allocated	Points
Exterior Environment		
6.1 Overall design is aesthetically pleasing to age of students	15	10
The interior aesthetics are appropriate for the age group of the students.		
6.2 Site and building are well landscaped	10	10
The existing landscaping provides a variety of species for trees, shrubs, and flowers situated attractively on	the site where used.	
6.3 Exterior noise and poor environment do not disrupt learning	10	5
Site is located near a major intersection and among commercial properties.		
6.4 Entrances and walkways are sheltered from sun and inclement weather	10	9
There are overhangs or other means of protection at entrances.		
6.5 Building materials provide attractive color and texture	5	3
The colors are predominately neutral beiges and whites and of standard building materials.		
Interior Environment	Points Allocated	Points
6.6 Color schemes, building materials, and decor provide an impetus to learning	20	10
The colors are predominately neutral beiges and whites and of standard building materials.		
6.7 Year around comfortable temperature and humidity are provided throughout the building	15	2
There is no central air conditioning.		
6.8 Ventilating system provides adequate quiet circulation of clean air and meets 15cfm VBC requirement	15	2
There is no central air conditioning.		
6.9 Lighting system provides proper intensity, diffusion, and distribution of illumination	15	5
All lighting levels could be improved.		
6.10 Drinking fountains and restroom facilities are conveniently located	15	12
There are an adequate number and the locations are good.		
6.11 Communication among students is enhanced by commons area(s) for socialization	10	8
The Gymnasium and lobby areas serve this purpose.		
6.12 Traffic flow is aided by appropriate foyers and corridors	10	9
Corridors terminate at lobbies and exits.		
6.13 Areas for students to interact are suitable to the age group	10	7
The Gymnasium and lobby areas serve this purpose.		
6.14 Large group areas are designed for effective management of students	10	7
The Gymnasium and lobby areas serve this purpose.		
6.15 Acoustical treatment of ceilings, walls, and floors provides effective sound control	10	7
The ceilings are typically acoustic lay-in systems or exposed tectum panels. The walls and floors are harden	r surfaces in most area	as.
6.16 Window design contributes to a pleasant environment	10	6

The windows are insulated units with integrated blinds. The Board Offices have much older single glazed windows.

6.17 Furniture and equipment provide a pleasing atmosphere

10

5

The loose furnishings are inconsistent in style, color, and materials. Many pieces of furniture are damaged yet others are in good condition.

LEED Observation Notes

School District: Nordonia Hills City

County: Summit School District IRN: Summit 50047

Building: Northfield Elementary

Building IRN: 27672

Sustainable Sites

Construction process can have a harmful effect on local ecology, especially when buildings are build on productive agricultural, wildlife or open areas. Several measures can be take however to prevent the impact on undeveloped lands or to improve previously contaminated sites. Appropriate location reduces the need for private transportation and helps to prevent an increase in air pollution. Developing buildings in urban areas and on brownfield sites instead of greenfield locations has economical and environmental benefits. Controlling stormwater runoff and erosion can prevent the worsening of water quality in receiving bodies of water and the impact on aquatic life. Once the building is constructed, it's important to decrease heat island effects and reduce the light pollution on the site.

(source: LEED Reference Guide, 2001:9)

Water Efficiency

In the US ca. 340 billion gallons of fresh water are withdrawn daily from surface sources, 65% of which is discharged later after use. Water is also withdrawn from underground aquifers The excessive usage of water results in the current water deficit, estimated at 3,700 billion gallons. Water efficiency measures in commercial buildings can reduce water usage by at least 30%. Low-flow fixtures, sensors or using non potable water for landscape irrigation, toilet flushing and building systems are just some of available strategies. Not only do they result in environmental savings, but also bring about financial benefits, related to lower water use fees, lower sewage volumes to treat and energy use reductions.

(source: LEED Reference Guide, 2001:65)

Energy & Atmosphere

Buildings in the US account for more than 30% of the total energy use and for approximately 60% of electricity. 75% of energy is derived from the burning of fossil fuels, which releases CO2 into the Atmosphere and contributes to global warming. Moreover, coal fired electric utilities release nitrogen oxides and sulfur dioxide, where the former contribute to smog and the latter to acid rain. Other types of energy production are not less harmful. Burning of natural gas produces nitrogen oxides and greenhouse gases as well, nuclear power creates nuclear wastes, while hydroelectric generating plants disrupt natural water flows. Luckily there are several practices that can reduce energy consumption and are environmentally and economically beneficial. Not only will they reduce the air pollution and mitigate global warming thanks to being less dependent on power plants, but also they will reduce operational costs and will quickly pay back. In order to make the most of those practices, it's important to adopt a holistic approach to the building's energy load and integrate different energy saving strategies.

(source: LEED Reference Guide, 2001:93)

Material & Resources

The steps related to process building materials, such as extraction, processing and transportation are not environmentally natural, as they pollute the air, water and use natural resources. Construction and demolition wastes account for 40% of the solid waste stream in the US. Reusing existing documents is one of the best strategies to reduce solid wastes volumes and prevents then from ending up at landfills. It also reduces habitat disturbance and minimizes the need for the surrounding infrastructure. While using new materials one should take into account different material sources. Salvaged materials exings on material costs, recycled content material minimizes waste products and local materials reduce the environmental impact of transportation. Finally, using rapidly renewable materials and certified wood decreases the consumption of natural resources. Recycling and reusing construction waste is another strategy to be taken into consideration in sustainable design.

(source: LEED Reference Guide, 2001:167)

Indoor Environmental Quality

As we spend a big majority of our time indoors, the emphasis should be put on optimal indoor environmental quality strategies while (re)designing a building. Otherwise, a poor IEQ will have adverse effects on occupants' health, productivity and quality of life. IEQ strategies such as ventilation effectiveness and control of contaminants or a building flush-out prior to occupancy can reduce potential liability, increase the market value of the building but can also result in a significantly higher productivity (16%). Other strategies involve automatic sensors and controls, introducing fresh air to the building or providing lots of daylighting views.

(source: LEED Reference Guide, 2001:215)

Innovation & Design Process

This category is aimed at recognizing projects that implemented innovative building features and sustainable building knowledge, and whose strategy or measure results exceeded those which are required by the LEED Rating System. Expertise in sustainable design is the key element of the innovative design and construction process.

 $^{{}^{\}star} \text{ INSPECTION ASSUMPTIONS for Reported/Assumed Asbestos-Free Materials (Rep/Asm AFM):} \\$

- Unless reported otherwise by the District, materials installed after 1980 are assumed to be asbestos-free. a.
- Unless reported otherwise by the District, small quantities (less than 1,000 square feet) of the following materials are assumed to be asbestos free: hard plaster, acoustical plaster and gypsum board systems; acoustical panels and tiles; fireproofing; 12"×12" floor tile and mastic. b.
- Unless reported otherwise by the District, all roofing materials are assumed to be asbestos-free. C.

THESE MATERIALS SHOULD BE PROPERLY SAMPLED AND ANALYZED FOR ASBESTOS PRIOR TO DISTURBING THEM.

 $^{{}^*\ {\}sf INSPECTION}\ {\sf ASSUMPTIONS}\ {\sf for}\ {\sf Reported/Assumed}\ {\sf Asbestos\text{-}Free}\ {\sf Materials}\ ({\sf Rep/Asm}\ {\sf AFM}):$

- a. Unless reported otherwise by the District, materials installed after 1980 are assumed to be asbestos-free.
- b. Unless reported otherwise by the District, small quantities (less than 1,000 square feet) of the following materials are assumed to be asbestos free: hard plaster, acoustical plaster and gypsum board systems; acoustical panels and tiles; fireproofing; 12"×12" floor tile and mastic.
- c. Unless reported otherwise by the District, all roofing materials are assumed to be asbestos-free.

THESE MATERIALS SHOULD BE PROPERLY SAMPLED AND ANALYZED FOR ASBESTOS PRIOR TO DISTURBING THEM.
